

LONG REACH FRONT

WBM Long Reach Fronts are designed and manufactured to support deep and long-distance digging applications, such as: dredging, canal cleaning, lagoon cleaning, material handling, river and canal pipeline crossings. WBM Long reach Fronts are available in either a Dredging configuration (Super Long Reach), or an Excavating configuration (Long Reach).

Dredging Fronts are for digging in very soft soils or silt and can be equipped with our General Ditching Bucket (GDB). These are typically used in dredging operations around marinas or other light duty digging operations.

Excavating Fronts are for general purpose digging and can be equipped with a Heavy Duty Digging Bucket (HDD). These have been used to access gravel at the bottom of quarry ponds and can be used for more general purpose excavating operations.

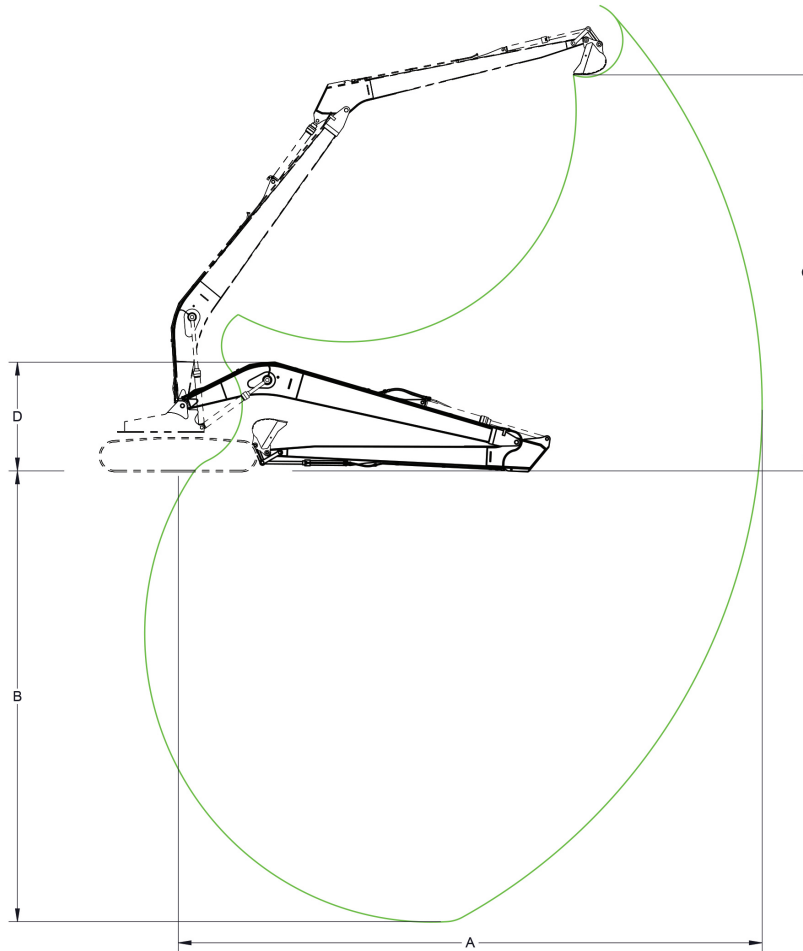

FEATURES AND BENEFITS

- Engineered to match capabilities of excavator
- Provides necessary reach for work applications
- Effective way to increase an excavators digging envelope

NOTE

- Some machines may require additional counterweight
- Attachments used must be downsized
